6.0 PROCESSING RECOMMENDATIONS

6.1 Due to variances in equipment, solder pastes and applications (board design, component density, etc.), Samtec does not specify a recommended reflow profile for our connectors. The processing parameters provided by the solder paste manufacturer should be employed and can usually be found on their website.

All of Samtec's surface mount components are lead free reflow compatible and compliant with the profile parameters detailed in IPC/JEDEC J-STD-020 which requires that components be capable of withstanding a peak temperature of 260°C as well as 30 seconds above 255°C.

Samtec Recommended Temperature Profile Ranges (SMT)

Sn-Pb Eutectic Assembly

Preheat/Soak (100°C-150°C)	Max Ramp Up Rate	Reflow Time (above 183°C)	Peak Temp	Time within 5°C of 235°C	Max Ramp Down Rate	Time 25°C to Peak Temp
60-120 sec.	3°C/s max.	40-150 sec.	235°C	20 sec. max.	6°C/s max.	6 min. max.

Pb-Free Assembly

Preheat/Soak (150°C-200°C)	Max Ramp Up Rate	Reflow Time (above 217°C)	Peak Temp	Time within 5°C of 260°C	Max Ramp Down Rate	Time 25°C to Peak Temp
60-120 sec.	3°C/s max.	40-150 sec.	260°C	30 sec. max.	6°C/s max.	8 min. max.

These guidelines should not be considered design requirements for all applications. Samtec recommends testing interconnects on your boards in your process to guarantee optimum results.

Series: **BNC7T** 75Ω True 75™ BNC Jacks & Plugs

6.2 Maximum Reflow Passes: The parts can withstand three reflow passes at a maximum component temperature of 260°C.

6.3 Stencil Thickness: The stencil thickness is .006" (0,15mm).

6.4 Placement: Machine placement of the parts is recommended.

6.5 Reflow Environment: Samtec recommends the use of a low level oxygen environment (typically achieved through Nitrogen gas infusion) in the reflow process to improve solderability.

6.6 Cleaning: Samtec, Inc. has verified that our connectors may be cleaned in accordance with the solvents and conditions designated in the EIA-364-11 standard.

6.7 Inverted Reflow: For applications requiring inverted reflow soldering, use of an epoxy adhesive is recommended. For more information on the use of epoxy adhesives, please visit the Processing page on our website or contact Samtec's Interconnect Processing Group at IPG@samtec.com

7.0 APPLICATION INFORMATION

7.1 Min Cable Bend Radius: CCA-1694A = 2.750" [69.85mm]

CCA-179 = .407" [10.20mm]

7.2 Assembly Mating: Bayonet coupling mechanism

7.3 Cable Management: Samtec recommends some form of cable management to prevent non-axial forces being applied to the connector.

7.4 Bulkhead Thread Mounting Torque: 8~10 in-lbs

7.5 Typical Bayonet Mating/Unmating Force: 3~19 N
